

# Blitz Elixir Project

Create a mix project application that:

- Given a valid `summoner_name` and `region` will fetch all summoners this summoner has played with in the last 5 matches. This data is returned to the caller as a list of summoner names (see below). Also, the following occurs:
  - Once fetched, all summoners will be monitored for new matches every minute for the next hour
  - When a summoner plays a new match, the match id is logged to the console, such as:
    - `Summoner <summoner name> completed match <match id>`
- The returned data should be formatted as:

```
[summoner_name_1, summoner_name_2, ...]
```

- Please upload this project to Github and send us the link.

Notes:

- Make use of Riot Developer API
  - <https://developer.riotgames.com/apis>
    - <https://developer.riotgames.com/apis#summoner-v4>
    - <https://developer.riotgames.com/apis#match-v5>
  - You will have to generate an api key. Please make this configurable so we can substitute our own key in order to test.
